

JAPAN AEROSPACE

★ CLIENT PROFILE

Japan Aerospace (JA) is a leader in the Japanese Aerospace Industry providing specialty services to Space and Aerospace businesses in the Asian Pacific. Their contribution to the development of business solutions makes them the premier supplier of diversified needs in the marketplace. Their genius lies in providing best solutions to ensure ease and safety. As a provider of products and services for aircraft production and maintenance, JA leverages their expertise and serviceability to bring the future into today.

THE CHALLENGE

FSM responded to a request by JA for the design of a seat for the C1 aircraft. Utilizing our product engineering services, we developed a seating unit that met the high quality standards of the Japanese Air Force with a differentiated design that allowed for replication on various other aircraft platforms.

AND THEN SOME...

We met with the leadership of the Japanese Air Force to test the viability of the unit. FSM went above requirements of contract to not only provide a seat design made to order, but one that could be used in other aircraft application, i.e., C47 and C130 aircraft. In addition, FSM provided instruction for installation.
